Subject Index

Accumulated photon echo 191
Activated scintillator materials 35
Antiferromagnets 147

Charge-transfer spectrum 89
Cluster 125
Coherent phonon 191
Coherent spectroscopy 191
Color centers 333
Contact electrification 317
CRTs 317

Diluted magnetic semiconductors 175
Doped nanocrystals 163
Dynamic intensity borrowing 269

Electron–hole liquid 233
Electron–phonon interaction 57
Energy transfer 301, 333
Energy transfer and rare-earth ions 325
Excited-state absorption 115
Exciton dynamics 175, 259
Excitons 57, 209, 243

f–d transition 89
Femtosecond pump–probe spectroscopy 259
Femtosecond time-and-space-domain holography 219
Ferroelectric magnet 141
Films 333
Fluorescence 155
Fluorescence line-narrowing 73
Fluorescent lamps 317
Fractional quantum Hall effect 57

Gadolinium 115
Gap mode 283
Glass 73

Heterostructures 243
Higher harmonic generations 291
Holography and quantum computing 219
Homogeneous broadening 115
Hot electrons 259

Imaging plate 307
Impurity ions 21
Inorganic insulating crystals 21
Interferometric coherency measurement 191
Intrinsic quenching center 125
Intrinsic scintillator materials 35
Inversion symmetry 21
Ionization potential 89

J-aggregates 269
Judd–Ofelt theory 131

Laser solids 131
Laser spectroscopy 1
Lasers 333
Linear Stark effect 21
Lithium floride 333
Localization 243
Luminescence efficiency 325

Magnetic field 147
Magneto-optical properties 175
Magnons 147
Mid-infrared pump–probe measurements 233
Multiphonon energy transfer 125

Nanocrystals 155
Nanostructures 175
Nonlocal response theory 283

Phonons 147
Phosphors 317
Photoluminescence 163, 301
Photon echoes 1, 191
Photostimulated luminescence 307
Polarons 57
Powder properties 317

Quantum beat 191
Quantum confinement 209
Quantum cutter 301
Quantum splitting 107

Raman 147
Rare-earth ions 1, 73, 89

Real-time spectroscopy 269
Resonant excitation 233
Resonant photonic crystal 283

Scintillation 35
Self-quenching 125
Sell-trapping 57
Semiconductor quantum dots 191
Silicon nanostructures 209
Single impurity molecule spectroscopy 219
Site-selective spectroscopy 73
Soft X-ray lasers 291
Solid solutions 243
Solid-state spectroscopy 57
Sol–gel glass 97
Spatial confinement 209
Spectral hole burning 1, 155, 219
Spectroscopy 107
Spin tronics 57
Standing wave 283
STM 259
Subpicosecond laser pulse 291

Thermal quenching 163
Thermoluminescence 333
Time-resolved Emission measurements 233
Transient collisional excitation 291
Two-magnon Raman scattering 141
Two-photon excitation 115

VUV 115

X-ray detectors 333
Xerogel 97

Zero-phonon line 219
